Storytelling with Data

REVIEW
HISTORY

Meets Specifications

Hi,

You have done an amazing work in this project. Congratulations. 🏆

Your work clearly demonstrates that you have good knowledge about the data and the story which needs to be projected from a particular business data. 👌 👌

Keep up the good work. 👏 👏 👍

Happy Learning. 😄

Visual Storytelling with Data

The visualization centers on a specific, clear finding in the data.

Some interesting analysis. Well done. 👏🏼

The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization.
Visualization does not add additional colors, shapes, or other design elements in an unnecessary way. Rather, each additional element should add to the insight being made.

Design

Color choices must accurately reflect the data and be chosen with accessibility in mind. For example, values that span from negative to positive numbers should be encoded with a diverging palette. Also, the color palettes should work for colorblindness.
